ABOUT BFW

BolognaFiere Water&Energy - BFW - is the joint venture founded by BolognaFiere, one of the leading Italian players in the trade fair market, and Mirumir, a company that has been promoting and organizing exhibitions and conferences on energy and technological innovation for over twenty years.

The desire of the two partners is to pool expertise and networking, both international and national, in order to develop a business project that contributes to the knowledge and sharing of issues related to the economic and social value of water, energy and new technological applications.

Only through constructive dialogue on a scientific basis is it possible to create the conditions for moving towards ecological transition.

STAKEHOLDERS

BolognaFiere is one of Italy's leading players in the exhibition industry, with more than 80 events in Italy and around the world. Attracting more than 2.2 million visitors and more than 25 thousand exhibitors overall, BolognaFiere is directly involved in the organization and management of exhibitions, as well as in stand-fitting services in which it vaunts a national leadership.

Mirumir is a service company specialized in the design and organization of trade fair events - national and international - conventions, conferences and workshops, focusing on the energy and fuel distribution sector. It represents an established and acknowledged reality in the energy & technology sector.

THE MANAGEMENT

Antonio Bruzzone
Chairman of the Board of Directors BFWE
General Manager of BolognaFiere

Paul Angelini
BFWE Chief Executive Officer
Administrator Mirumir

Domenico Lunghi
Member of the Board of Directors BFWE
BU Director BolognaFiere

OUR POINT OF VIEW

BFWE has adopted a scientific approach to embrace the ecological transition. Only through constructive dialogue based on scientific principles, free from prejudice, is possible to achieve the necessary conditions to concretely implement the sustainable development goals.

Research and Innovation, Digitalization, Sustainability are the keywords for BFWE.

SIX EXHIBITIONS

The core axis of BFW consists of the six exhibitions currently held by the company. Six initiatives ranging from water to hydrogen, passing through methane, LNG and the refueling station of the future, naturally contemplating electric and other alternative fuels, present BFW as a candidate to become the Italian reference point on these topics and related sustainable mobility. Furthermore, BFW is the reference exhibition for the market on the technological applications of drones.

[ACCADUEO](#), for over 30 years, has been the reference exhibition event for the Italian and International water service industry.

Since 2022, the biennial international water exhibition alternates with the ACCADUEO FORUM, a conference event dedicated to digitalization and innovation in the sector.

[ConferenzaGNL](#) was launched in 2012 to promote liquefied natural gas for the energy transition and emission reduction in transport both in Italy and the Mediterranean.

The reference trade fair event for the LNG sector, it highlights the issues of greatest interest for the entire supply chain. During the annual workshops, it analyses the different fields of application of the commodity without forgetting to give space to the evolution of the sector and its new challenges. One above all, the transition and future potential of bio-LNG.

[HESE - Hydrogen Energy Summit&Expo](#) is the main Italian initiative dedicated to new technologies for the production, transport and storage of hydrogen.

During HESE, representatives of the industrial community, as well as institutions and associations, discuss the new development directions of an energy industry that will play an important role in the near future.

[CH4](#), until last year part of ACCADUEO, is the trade fair dedicated to technologies and systems for the transport and distribution of gas which, from 2022, will evolve and open up to topics related to the use of methane in mobility.

[Fuels Mobility](#) is the annual event where institutions, associations and companies converge to design together the service station of the future, no longer just petrol stations but real multi-energy and multi-service retailers.

An initiative to give voice to a sector attentive to constantly evolving market trends.

[Dronitaly](#) was created in 2014 and is the reference event for civil drones for professional use in Italy.

Through the years, it has closely followed developments in the sector between innovation and regulatory issues. The event is characterized by a lively debate between sector companies, associations and key stakeholders held during a series of thematic workshops.
